DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Scandella.
- 3. Scandella discloses the device as claimed where: 10 is a level vial with a longitudinal axis; 11 are a pair of retainer clips; 14 is a slot within the level web for holding the vial and retainer clips; and the clips may be slidingly displaced along the level vial.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Scandella in view of Liao.
- 6. Scandella discloses the invention substantially as claimed. However, Scandella does not disclose the upper lugs and lower lugs or the horseshoe shaped notches as claimed. Liao discloses how a horseshoe shaped notch 38 may be used in conjunction with a lug 46 for the purpose of holding a level vial in place. Therefore, it would have been obvious at the time the

Art Unit: 2859

invention was made for one of ordinary skill in the art to use the lug and notch as taught by Liao in conjunction with the device of Scandella for the purpose of holding a level vial in a measuring position within a web. Furthermore, it would have been obvious at the time the invention was made for one of ordinary skill in the art to use a plurality of lugs and notches as taught by Liao in combination with the Scandella device since such a combination is merely duplicating parts for a multiplied effect, which the courts have held to be obvious [see *St. Regis Paper Co. v. Bemis Co., Inc.*, 193 USPQ 8, 11 (7th Cir. 1977)]. Additionally, if the parts of Liao were duplicated in combination with the device of Scandella, the combination would inherently yield upper and lower lugs. Such a combination would have been obvious at the time the invention was made for one of ordinary skill in the art for the purpose of more securely attaching the retaining rings of Scandella to a web by increasing the number of lug/notch combinations.

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to G. Bradley Bennett whose telephone number is 571.272.2237. The examiner can normally be reached on M-TH 8:30-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Diego F.F. Gutierrez can be reached on 571.272.2245. The fax phone number for the organization where this application or proceeding is assigned is 571.273.8300.
